Imagination Station: Cultivating Creative Minds

Imagination is the cornerstone of cognitive development, problem-solving, and emotional intelligence in early childhood. This interactive workshop explores evidence-based strategies for nurturing imaginative thinking in children from birth through age six. Through guided discussions and hands-on activities, educators will learn to create environments that spark curiosity, encourage divergent thinking, and honor each child's unique creative voice. Whether you're caring for infants, discovering cause-and-effect, or preschoolers building elaborate pretend worlds, this workshop provides the research foundation and practical tools to transform your program into an imagination incubator.

Instructor: Rebekka Zydel
